Front cover: Canarina canariensis in the shady laurel forests of Tenerife.

#### Day One: 22<sup>nd</sup> February. Arrival in Tenerife.

After a rather more eventful travel day than some of us might perhaps have liked, we touched down under the blue skies of Tenerife, and before too long we were at our hotel in the old town of La Orotava, on the rugged north side of the island.

#### Day Two: 22<sup>nd</sup> February. Anaga

The day started with the sound of singing Atlantic Canaries and Canary Island Chiffchaffs coming across the rooftops of La Orotava.

Our journey took us across to the south coast, past the metropolis of Santa Cruz de Tenerife, the largest city on the island, and then further east to San Andres, from where we struck inland, climbing from the coast through the 'thermophilous scrub' vegetation of the lower slopes of the Anaga mountains, dominated by the organ pipes of *Euphorbia canariensis* and the leafier, spreading *Euphorbia lamarckii*, along with the invasive Prickly Pear *Opuntia maxima* and *Agave americana*.

A handful of genera of plants are really noticeable for their diversity on the Canary Islands, plants that have reached the islands and radiated to fill a whole new set of niches. The *Aeonium* house leeks and *Echium* viper's buglosses are near the top of that pile, and our first stop gave us our first taste for both these groups. We pulled over near a short cutting through the rocks, where we found the white-flowered Anaga Viper's Bugloss *Echium leucophaeum* and *Aeonium lindleyi subsp lindleyi*, both restricted to the north eastern end of Tenerife. Higher up on the rocks were the large, 'blousey' rosettes of *Aeonium canariense*, along with the woody-stemmed *Aeonium urbicum subsp urbicum*.

Down by the roadside we found the leathery, shrubby *Rumex lunaria*, looking as un-dock-like as a plant could, along with various weeds from the warmer parts of the world: pink spikes of *Achyranthes sicula* and the broad leaves of *Ageratina adenophora*, both from Central America; the pretty southern African grass *Cenchrus orientalis* and a big patch of South African pelargoniums, the red-flowered *Pelargonium inquinans* and pinky *Pelargonium graveolens*.

A male Sardinian Warbler popped up, while a small group of Atlantic Canaries fed on the flowers of *Salix canariensis* in the 'barranco' beneath the road, and a Canary Island Chiffchaff flicked through the trees, while the butterfly list got off to a good start with a single Canary Islands Blue, posing on the *Echium* flowers.

Back on board the bus, and we headed uphill, noticing Tree Heather *Erica arborea* becoming a dominant part of the roadside scrub as we gained height, before we arrived at the ridge, and the laurosilva 'cloud forest', with the cloud rolling in from the north. Another of those radiating genera is the sow-thistles, with a great variety of *Sonchus* species, and we found our first two up here: the large rosettes and tall flower stems of *Sonchus acaulis*, growing alongside the woody, branching *Sonchus congestus*, something of a speciality of the humid laurel forest found along the ridges of northern Tenerife and on Gran Canaria. The rocks by the viewpoint had yet another house-leek, *Aeonium cuneatum*, and nearby we had our first up-close encounter with the Canary Islands Laurel *Laurus novocanariensis*.

A little further along the ridge, and we stopped for a walk through the 'Enchanted Forest', a very atmospheric, mist-filled habitat. Canary Islands Crane's-bill *Geranium reuteri*, Canary Islands Buttercup *Ranunculus cortusifolius* and the iconic Canary Island Bellflower *Canarina canariensis* added splashes of colour to the roadsides, and interest amongst the scrub layer came in the form of Shrubby Pellitory *Gesnouinia arborea*, *Viburnum rigidium* and *Phyllis nobla*.

Heading into the trees, we found ferns aplenty, including the beautiful tree-fern-like fronds of *Woodwardia radicans*. Along the path sides we found Canary Island Gentians *Ixanthus viscosus*, known as 'Queen of the Mountains' in Spanish, including at least a couple of plants in flower, something they don't normally do until April... No such luck with the carpets of Anaga Violets *Viola anagae*, nor the Large-leaved St John's-wort *Hypericum grandifolium*, both still a month away from flowering.

The normally-moist laurel forest was surprisingly dry underfoot, so it took some turning of logs before we found one of the stars of the forest, the endemic semi-slug *Insulivitrina lamarckii*. Legend has it that, when annoyed, they can wag their tails so vigorously that, on wet days, they can leap about like tiny fish out of water. I'm pleased to say, there was no annoying of semi-slugs on this occasion...

After lunch, the laurel forest decided to go back to doing what it does best, and became increasingly moist... and it wasn't long before we could no longer convince ourselves that it was just 'thick drifting cloud', but instead was actual rain... which made for a wetter-than-hoped walk back along the road.

Nonetheless, there was still plenty of interest to see, particularly around the rock cuttings at the roadside, where we found Hare's-foot Fern *Asplenium hemionitis*, our first *Aichryson laxum*, and two more species endemic to these north eastern mountains: the succulent little *Monanthes anagenesis*, and the furry-leaves of the Anaga False-Sage *Sideritis macrostachys*.

Alas, the rain really set in, and with the cloud pouring over the ridge it made for a rather view-less stop at the Cruz del Carmen viewpoint, and so it was back to the hotel, in a significantly-less-rainy La Orotava.

#### Day Three: 24<sup>th</sup> February. Teno

With the sea conditions too rough to venture out onto, a change of plans saw us heading west along the north coast, and then up into the rugged Teno mountains of the north-west corner of the island.

The switch-back roads took us up from sea level into the hills, through plenty more interesting succulent scrub: our first attempted stop revealed the wind was considerably stronger than we might have thought, so we headed higher up before finding a more sheltered 'mirador' stop.

The mountains of Teno are home to a different suite of plants to those in the eastern Anaga mountains, and our roadside stop introduced us to several of them, including *Aeonium pseudourbicum* (very similar to the eastern *Aeonium urbicum*) and *Echium aculeatum* (a western counterpart of yesterday's *Echium leucophaeum*). We got our first good up-close look at the

succulent ragwort-relative *Kleinia neriifolia*, doing it's very best Euphorbia impression, with a very similar growth form to *Euphorbia lamarckii*. And another impressive sow-thistle appeared in the form of the Canary Islands Tree Sow-Thistle *Sonchus canariensis*, a very definite tree.

Onwards, and we found ourselves in the very picturesque, but also very popular, village of Masca, perched up above the impressive Masca gorge. Pedro did a sterling job of finding us a suitable parking spot, and we went to investigate the village... and find ourselves some refreshments along the way.

A pair of Ravens were tumbling overhead, a Canary Islands Speckled Wood fluttered past, and a couple of young West Canaries Lizards scrapped beneath an *Opuntia*, here represented by the Northern Tenerife subspecies.

Coffee and post cards all successfully sourced, we made our way back to the bus, and then joined the painfully slow line of traffic heading out of the mountains... The glacial pace of the traffic did at least give us a good chance to see some more of the characteristic plants of the area, including the handsome Dark-red Spurge *Euphorbia atropurpurea*, the glaucous-leaved Tenerife Lavender *Lavandula buchii*, and two more Echiums, with the Giant White Bugloss *Echium giganteum* and the lavender-flowered Tenerife Bugloss *Echium virescens*.

Down to the market town of Santiago de Teide (complete with market), and then we were back on to 'normal' roads, and a short drive on to the hilltop village of Erjos, where we had our lunch and admired the stunning Parrot's Beak Lotus, an impressive scrambling plant with flame-like flowers: a popular garden plant in warmer parts of the world, the five related species of Parrot's Beak Lotus are all Canary Islands endemics, now all critically endangered in the wild, with the Tenerife endemic *Lotus berthelotii* perhaps lost as a wild species and the related species from La Palma and Gomera both found at just a single location each. The garden plants are mostly hybrids between Tenerife's two species, the deep red *Lotus berthelotii* and the orange *Lotus maculatus*.

After lunch, we wandered down through the village, enjoying a good array of wall-growing Crassulaceae along the way, including the pink-tinged rosettes and creamy flowers of *Aeonium haworthii*, the golden stars of *Aichryson puncatum*, the tiny spidery rosettes of *Monanthes brachycaulos* and the wall pennywort *Umbilicus gaditanus*.

Heading up onto the ridge, we scanned down either side, hoping for one of the Canary Islands' two endemic pigeon species to put in an appearance, but the strong winds kept any pigeons out of sight for today... although a male Sparrowhawk zipping through the trees and a trio of Buzzards enjoyed playing in the wind, both raptors represented here by endemic subspecies.

Plants along the way included the white-flowered broom *Chamaecytisus proliferus*, the shiny stemmed Canary Islands Strawberry Tree *Arbutus canariensis*, the bright pink flowers of *Convolvulus althaeoides* and the sorrel-like leaves of Madeiran Dock *Rumex maderensis*.

With the pigeons definitely not putting in an appearance, and time ticking on, we headed back to the bus, and the drive back down to the coast and along to La Orotava.

#### Day Four: 25<sup>th</sup> February. Erjos to Silos

Heading west along the north coast, our first stop of the day was at the Mirador de La Grimonas, overlooking the big waves breaking from the north: our attention was focused in the opposite direction, looking up the steep cliff behind us, where we eventually caught sight of our quarry: two or three Laurel Pigeons, flying amongst the dead trees half way up the slope, with one perching up, the white tip to its tale showing up nicely.

From here it was back to Erjos, and the start of our unrelentingly downhill walk through the Barranco de Cuevas Negras, to Los Silos.

A stately Canary Islands Juniper *Juniperus cedrus* was in the middle of the village, just outside the bar. On the edge of the village, interesting weeds and garden escapes included the large pink Tangier Pea *Lathyrus tingitanus*, showy *Salvia hispanica*, the clubmoss-like *Sedum lycopodiodes* and hedges made of the prickly *Aloe ciliaaris*.

In the more sheltered open areas below the village, plenty of Canary Islands Chiffchaffs flitted about, a Tenerife Robin posed nicely for us, while another sang from the trees, and a handsome Canary Islands Red Admiral appeared, feeding on the sow-thistle flowers.

The path soon ducked into the shade of the laurel forest, and was much like this right past the abandoned village of Cuevas Negras. Canary Island Bellflowers were everywhere, while new plants came in the form of Kidney Fern *Adiantum reniforme*, the pinky-stemmed *Scilla haemorrhoidalis* and two rather cryptic orchids: Two-leaved Orchid *Gennaria diphylla* just bursting into flower, alongside the just-finished Three-fingered Orchid *Habenaria tridactylites*. One or two Bolle's Pigeons were heard cooing and flapping away, unseen, from the tree canopy, and we found a few tell tale (and tail) feathers on the path.

We also managed to get our eye in on to some of the confusingly similar laurel trees, thanks in part to their parasites: we found the large-leaved Indian Laurel *Persea indica*, a tree that, despite its name, is restricted to the Canary Islands and Madeira, as are all three of the laurels we found during the day; Barbusano Laurel *Persea barbujana* whose leaves were blistered by the galls caused by the mite *Aceria barbujanae*; and the Canary Islands Laurel *Laurus novocanariensis* with subtle pale spots along the midrib of the leaves, playing host to the 'Mother of the Laurels' *Laurobasidium lauri*, a fungus which causes the growth of tentacle-like galls exploding from the trunk of the tree.

As we emerged from the dark of the forest, we came out into the 'thermophilous' zone, where the Canary Islands Tree St John's Wort *Hypericum canariense* became dominant, with its yellow flowers lighting up the hillsides. The purple flowers of Canary Islands Wall-flower *Erysimum bicolor* appeared at the track side, before we reached an impressive rocky cliff, giving us stunning views down (even further) towards Los Silos, where a single wild Dragon Tree *Dracaena draco* hung on to its crag-top perch, and a couple of Laurel Pigeons flapped by. On the cliff face above us, the broad disks of *Aeonium tabulaeforme* were dotted about, together with the upright greyish 'pipes' of *Ceropegia dichotoma*, the broad 'lambs ear' leaves of *Siderits cretica* and two more species of *Monanthes:* the tiny globular rosettes of *Monanthes polyphylla* and the silver, succulent leaves of *Monanthes laxiflora*.

From here, it was down to Los Silos, and back to the hotel, with everyone's thighs and knees reminding us of our day's exertions...

#### Day Five: 26<sup>th</sup> February. La Orotava and Los Gigantes

A free morning was spent, for many of us, exploring the old town of La Orotava, with its gardens and museums, while others ventured further afield, into Puerto de la Cruz and its 18<sup>th</sup> century Jardin Botanico complete with 200 year old fig tree.

After lunch, we set off to the sheltered west coast, and our whale watching trip in the company of Mercedes and Matt from Whale Wise Ecotours, along with plenty of Cory's Shearwaters and a fantastic pod of around 100 Atlantic Spotted Dolphins, getting up to all sorts all around us, including plenty of 'exchange of genetic material'.

As we headed back into port, after a fantastic dolphin-filled two hours, a Loggerhead Turtle popped its head above the waves, before dropping back down into the deep...

In the evening, on the walk back to the hotel, we paid a visit to 'our' Tenerife Gecko, on his wall beneath a street light, and found a handful of interesting moths, including Macaronesian endemics, and The Traveller, a North American species that, like the Monarch butterflies in the botanic gardens, seems to have colonised the Canary Islands and Madeira.

#### Day Six: 27th February. Corona Forestal and Mount Teide

Despite our bus company's attempts to thwart us, this morning we headed up to the Canary Pine forests that circle the island between 1200 and 2200 metres above sea level, the 'corona forestal'.

Last year's forest fires had had a very obvious impact on the forests, and our wander through the forest had to be diverted away from an area where the forestry department are busy carrying out remedial works. Nevertheless, we still found plenty to keep us enteretained.

The forests are a monoculture of the long-needled Canary Islands Pine *Pinus canariensis,* a tree whose closest relative is apparently *Pinus roxburghii,* a species from the western Himalayas, a distribution pattern similar to the laurel forests and *Bosea* species . The limited understorey was mostly made up of *Cistus symphytifolius* and *Cistus monspeliensis,* as well as some regenerating *Daphne gnidium* and another shrubby St John's-wort *Hypericum reflexum.* We found a big *Echium virescens* coming into flower, several spotty rosettes of Dense-flowered Orchid *Neotinea maculata* and, clinging to a pathside boulder, the lovely rosettes of *Monanthes brachycaulos.* 

Up in the treetops were plenty of African Blue Tit, Atlantic Canary and Canary Island Chiffchaffs, while Tenerife Goldcrests seemed to particularly like the *Juniperus cedrus* around the picnic site, where both Canary Islands Chaffinch and Tenerife Robins were hoping for handouts. A little pack of swifts high above us seemed to be migrant Common Swifts, along with a single House Martin.

We left the pine forests, and headed over into the amazing other-worldly landscapes of the 'cañadas', the seemingly-barren crate plain, 14km in diameter, at the centre of the island. Our appointment was with the volcano rising up from the centre, Mount Teide, at 3718 metres the highest mountain in Spain.

The cable car took us up to the just below the peak, from where we explored the two short trails leading off to some spectacular views out over the Canary Islands, with the peaks of La Palma, La Gomera and Gran Canaria all visible poking out from beneath the clouds. One or two Western Canary Islands Lizards scuttled about, and a handful of rosettes of the endemic Teide Violet *Viola cheiranthifolia* were the only signs of life amongst the volcanic rocks of the mountain top.

Having all had our fill of the high altitude and thin air, we headed back down to the crater floor, and a refreshment stop at a café where, as well as coffees and ice creams, we found a wonderfully confiding pair of Tenerife Blue Chaffinch, hopping about the car park and surrounding bushes.

#### Day Seven: 28<sup>th</sup> December. The Cañadas

Back up to the cañadas, where we stopped at the El Portillo visitor centre, and spent our day exploring the dry slops and arid plains between here and the 'Fortaleza' massif.

Our walk gave us the chance to see some of the special plants of this unique habitat: Teide Broom *Spartocytisus supranubius,* Teide Sticky Broom *Adenocarpus viscosus,* Teide Flixweed *Descurainia bourgeauana* and Teide Wallflower *Erysimum scoparium,* Teide Shrubby Scabious *Pterocephalus lasiospermus,* Teide Margarite *Argyranthemum tenerifae, Cheirolophus teydis* and *Carlina xeranthemoides,* as well as the spectacular 'skeletal' remains of Teide Bugloss *Echium wildpretti.* All are plants that are in flower during the hot summers, when the arid cañadas come into bloom.

Whenever we stopped for a rest, hopeful Western Canary Island Lizards appeared amongst the rocks, hoping to pick up crumbs, while a small white butterfly flitting amongst the wallflowers and flixweed was the endemic Tenerife Green-striped White, a butterfly whose entire world range is within the 14km diameter of the crater rim.

Amongst the dry scrub, we found a handful of Spectacled Warblers, along with a pair of Canary Islands Grey Shrikes, while Tenerife Blue Chaffinch again put on a show around the visitor centre.

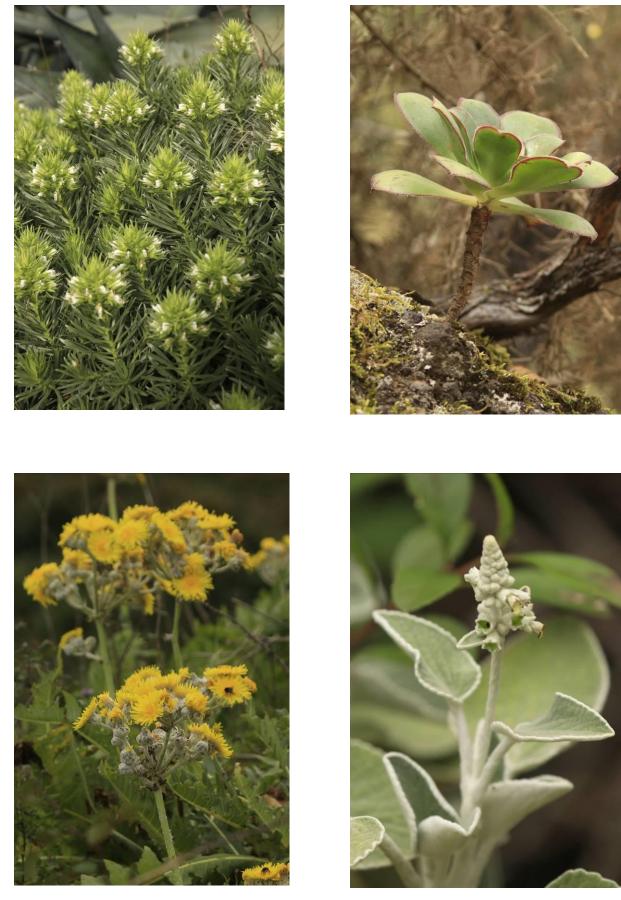

#### Day Eight: 29<sup>th</sup> February. Departure

One last breakfast in the inner courtyard, and then it was time to bid farewell to La Orotava, and make our way back to Tenerife Sur.

Thanks to some very cautious time keeping from the bus company, we had plenty of time at the airport, so some of us went to explore the dry xerophytic scrub around the staff car park, maybe not the most scenic of locations, but one with plenty of interesting plants, including *Euphorbia balsamifera* and *Euphorbia canariense*, the 'droopy' *Plocama pendula*, two more shrubby yellow 'daisys' in the form of the chicken wire bush *Launea arborescens* and the succulent *Schizogyne sericia*, the rather lovely pink Bladder Dock *Rumex vesicarius* and the succulent grey pipes of the extraordinary *Ceropegia fusca*, with its enormous 'bull's horn' seed pod.

A couple of Berthelot's Pipits running about the car park bade us farewell, as it was time to venture back into the busy airport and, eventually, our various journeys home.

#### Philip Precey, Wildlife Travel. February 2024

(clockwise, from top left): Echium leucophaeum, Aeonium pseudourbicum, Sideritis cretica subsp cretica, Sonchus acaulis.

E = endemic to Canary Islands. e = endemic to Macaronesia (Canary Islands, Madeira, Azores, Moroccan coast)

#### PLANTS

	SCIENTIFIC NAME	ENGLISH NAME	Notes
			Notes
	Selaginellaceae (spikemoss fan	nily)	
	Selaginella denticulata	Mediterranean Clubmoss	Anaga
	FERNS		
	Adiantum reniforme	Kidney Fern	Cuevas Negra
	Anogramma leptophylla	Annual Fern	Cuevas Negra
	Asplenium hemionitis	Hare's-foot Fern	Anaga
	Asplenium onopteris		Anaga
	Asplenium trichomanes	Maidenhair Spleenwort	La Caldera
	Davallia canariensis		Common 'wall top' fern, eg Erjos
	Polypodium macaronesicum	Macronesian Polypody	Anaga
	Woodwardia radicans		The large fern, Anaga
	CONIFERS		
	Pinaceae (pine family)		
E	Pinus canariensis	Canary Island Pine	On lower slopes of Teide
	Cupressaceae (cypress family)		
e	Juniperus cedrus	Canary Island Juniper	Erjos, La Caldera: also found in Madeira
	Araucariaceae (monkey puzzle	family)	
	Araucaria heterophylla	Norfolk Island Pine	Common street/town tree
	DICOTYLEDONS		
	Aizoaceae (fig-marigold family)		
	Aizoon canariense		airport car park
	Amaranthaceae (amaranth fan	nily) (includes former Chenopod	iaceae)
	Achyranthes sicula		Pink flower spike, Central
			American weed, common at
			roadside
E	Bosea yervamora		above Los Silos: laden with red
			berries.
	Anacardiaceae (sumac family)		
	Schinus molle	Peruvian Pepper Tree	A common street tree, eg
			around the airport
_	Aquifoliaceae (holly family)		
E	Ilex canariense	Canaries Holly	Anaga
	Apiaceae (carrot family)		
	Drusa glandulosa		Very strange looking
			'umbellifer', field edges, Erjos

			Nutri
	SCIENTIFIC NAME	ENGLISH NAME	Notes
Ε	Ferula communis subsp linkii	Canary Islands Fennel	Yellowy 'fennel' at roadside
	Foeniculum vulgare	Wild Fennel	Erjos
	Torilis cf elongata		Masca
	Apocynaceae (dogbane family)	(includes former Asclepiadace	eae)
Ε	Ceropegia dichotoma	Green Ceropegia	above Los Silos
Ε	Ceropegia fusca	Brown Ceropegia	
	Periploca laevigata		'bulls horn' seed pods: Anaga
	Araliaceae (ivy family)		
Ε	Hedera canariensis	Canary Islands Ivy	Anaga
	Schefflera actinophylla	Schefflera	Town street tree: red flower
			spikes, originally from New
			Guinea
	Asteraceae (daisy family)		
	Ageratina adenophora		Weed, originally from central
			america
Ε	Allagopappus canariensis		Yellow 'groundsel' shrub, Erjos
			ridge
е	Andryala pinnatifida		Glaucous-leaved shrubby
			dandelion, Anaga
Ε	Argyranthemum frutescens		Erjos
Ε	Argyranthemum tenerifae	Teide Margarite	Las Cañadas
Ε	Asteriscus sericeus		Yellow daisy shrub, La Orotava:
			originally from Fuerteventura,
			grown elsewhere as an
			ornamental
	Bidens pilosus		Roadside week, originally from
			Central America
	Calendula arvensis	Field Marigold	Erjos
е	Carlina salicifolia		Erjos
Ε	Carlina xeranthemoides		Las Cañadas
Е	Cheirolophus teydis		Las Cañadas: eg El Portillo car
			park
	Cotula australis		Tiny 'button flower' along
			pavements: originally from
			Australia
	Galactites tomentosa		Purple flower, 'milk thistle'
			leaves, Masca
E	Kleinia neriifolia		Succulent euphorbia-like shrub,
			common in the dry shrub zone.
			Eg Masca
	Laphangium luteoalbum		Erjos
	Launaea arborescens		Airport car park

	SCIENTIFIC NAME	ENGLISH NAME	Notes
E	Pericallis echinata		Pink roadside daisy
	Phagnalon rupestre		Erjos: 'shaving brush' flowers
е	Schizogyne sericea		Airport car park
	Senecio angulatus		Climbing, leathery-leaved 'ragwort', Erjos: originally from South Africa
	Silybum marianum	Milk Thistle	White-veined thistle leaves, La Orotava waste ground
Ε	Sonchus acaulis	Stemless Sow-thistle	Anaga
	Sonchus asper	Rough Sow-thistle	Erjos
Ε	Sonchus canariensis	Canaries Tree Sow-thistle	Masca
Ε	Sonchus congestus	Laurel Forest Sow-thistle	Anaga
Е	Sonchus leptocephalus	Small-headed Sow-thistle	Fine-leaved 'tree' sow-thistle: eg
_	(=Atalanthus pinnatus)		Masca
	Sonchus oleraceus	Smooth Sow-thistle	Anaga
Е	Sonchus radicatus	Cliff Sow-thistle	above Los Silos: glaucous leaf
			rosettes
	Bignoniaceae		
	Pyrostegia venusta		Garden 'vine' with orange
	, 5		tubular flowers: originally from
			South America
	Boraginaceae (forget-me-not	: family)	
Ε	Echium aculeatum		White flowers, smaller bush:
			around Masca
	Echium bonnetii	Canaries Viper's Bugloss	
Е	Echium giganteum	Giant White Bugloss	White flowers, large bush:
		-	around Masca and Erjos
Е	Echium leucophaeum		White flowers, smaller bush:
			lower slops of Anaga
	Echium plantagineum		nr Masca
Е	Echium simplex	Rocket Bugloss	tall white bugloss, planted on a
		-	roundabout
Ε	Echium virescens	Tenerife Bugloss	Pinky blue flowers, large bush:
		-	around Masca, La Caldera
Ε	Echium wildpretti	Teide Bugloss	Teide: rosettes and 'skeletons'
	Brassicaceae (cabbage family	-	
Е	Descurainia bourgeauana	Teide Flixweed	Las Cañadas
Ε	Descurainia millefolia	Canaries Flixweed	Above Silos
Ε	Erysimum bicolor	Canaries Wallflower	Above Silos
	•		

Γ

	Senna didymobotrya		Yellow-flowered senna, town
			tree
Е	Spartocytisus supranubius	Teide White Broom	Linear-leaved shrub, Las
			Cañadas
	Ulex europaeus	Gorse	Erjos
	Fagaceae (beech family)		
	Castanea sativa	Sweet Chestnut	above La Orotava
	Frankeniaceae (sea heath fan	nily)	
	Frankenia boissieri		Airport car park
	Gentianaceae (gentian family	)	
Е	Ixanthus viscosus	Canaries Gentian	Anaga
	Geraniaceae (geranium family	(Y)	
	Erodium moschatum	Musk Stork's-bill	Erjos
Е	Geranium reuteri	Canaries Crane's-bill	Anaga
	Geranium robertianum	Herb Robert	Erjos
	Pelargonium graveolens		Pink flowers, originally from
			South Africa
	Pelargonium inquinans		Red flowers, originally from
			South Africa
	Hypericaceae (st john's wort	family)	
е	Hypericum canariense	Canary Islands Tree St John's-	Cuevas Negras. Also found in
		wort	Madeira
е	Hypericum grandifolium		Anaga. Also found in Madeira

	SCIENTIFIC NAME	ENGLISH NAME	Notes
Ε	Hypericum reflexum		La Caldera
	Lamiaceae (mint family)		
Е	Lavandula buchii	Tenerife Lavender	Masca
Е	Lavandula canariensis	Canaries Lavender	La Orotava
Е	Micromeria lachnophylla	Teide False Thyme	Las Cañadas
Е	Micromeria ericifolia (=varia)	Canary False Thyme	Erjos
Е	Salvia canariensis	Canary Sage	Not yet in flower: Masca
	Salvia hispanica	Chia Sage	showy Salvia, Erjos: originally
			from central America
Е	Sideritis cretica subsp cretica	Teno False-sage	above Los Silos
Е	Sideritis macrostachys	Anaga False-sage	Anaga
	Stachys arvensis	Field Woundwort	Erjos
	Lauraceae (laurel family)		
	Laurus novocanariensis	Canary Laurel	Laurel with pale dots along leaf
е			midrib, and hosting 'Mother of
			Laurel' fungus: eg Cuevas Negra
e	Persea (=Apollonias) barbujana	Barbusano Laurel	Laurel tree with 'blister' galls on
	Dana an in dia n	to dia a tanget	leaves: Cuevas Negra
e	Persea indica	Indian Laurel	Laurel with very large leaves:
	Maragaa (fig family)		Cuevas Negra
	Moraceae (fig family) Ficus carica	Common Fig	Roadsides in towns
	Ficus rubiginosa	Port Jackson Fig	The huge fig tree at Masca, and
	Ficus rubiginosu	FOIL JACKSOIL FIG	a common town street tree.
	Myricaceae (wax myrtle family)		
	Myrica faya		Anaga
	Oleaceae (olive family)		Andga
	Jasminum odoratissimum		Cuevas Negras
	Oxalidaceae (wood-sorrel family		
	Oxalis pes-caprae	Bermuda Buttercup	Common weed, originally from
			South Africa
	Passifloraceae (passion flower fa	amily)	
	Passiflora edulis	Passion-flower	Erjos: originally from South
	2		America
	Plantagina <u>ceae (plantain familv)</u>	(includes former Globulariaceae	
	Misopates oronticum	Weasel's Snout	Erjos
	Plumbaginaceae (leadwort fami		
Ε	Limonium arboreum	Tree Sea Lavender	Planted, La Orotava
	Polygonaceae (dock family)		
Ε	Rumex lunaria	Canary Islands Shrubby Dock	Shrubby dock, common at
		, , ,	roadsides
e	Rumex maderensis	Madeiran Dock	Erjos
L			-

Γ

	SCIENTIFIC NAME	ENGLISH NAME	Notes
	Rumex vesicarius	Bladder Dock	Airport car park
	Primulaceae (primrose family	()	
е	Heberdenia excelsa		Anaga
	Ranunculaceae (buttercup fa	imily)	
Ε	Ranunculus cortusifolius	Canary Islands Buttercup	Anaga: most not yet in flower
	Rhamnaceae (buckthorn fam	ily)	
E	Rhamnus crenulata		Cuevas Negras
е	Rhamnus glandulosa		Anaga
	Rosaceae (rose family)		
E	Bencomia caudata	Mountain Tree Burnet	Cuevas Negras
E	Bencomia exstipulata	Cañadas Tree Burnet	El Portillo
	Eriobotrya japonica	Loquat	Masca
	Prunus dulcis	Almond	Masca
	Rubiaceae (madder family)		
e	Phyllis nobla		Anaga: the common roadside shrub
Е	Plocama pendula		Airport car park
е	Rubia fruticosa		broad-leaved madder, Cuevas
			Negras
е	Rubia occidens		fine-leaved Madder, Cuevas
			Negras
	Theligonum cynocrambe	Dog Cabbage	Erjos
	Salicaceae (willow family)		
е	<i>Salix pedicellata</i> subsp	Canary Islands Willow	Anaga
	canariensis	•1 \	
	Scrophulariaceae (figwort far		
E	Scrophularia glabrata	Canaries Mountain Figwort	Las Cañadas
	Myoporum laetum	Ngaio	The sweet-smelling, bee- covered tree behind the hotel.
			Introduced from New Zealand
	Solanaceae (nightshade fami	ly)	
	Nicotiana glaucum		Airport car park
	Salpichroa origanifolia		Roadside weed, with small bell-
			shaped flowers and round
			leaves, La Orotava
	Solandra maxima		garden 'vine' with enormous
			yellow trumpet flowers
	Thymeleaceae (daphne famil	y)	
	Daphne gnidium		La Caldera
	Tropaeolaceae (nasturtium fa		
	Tropaeolum majus	Garden Nasturtium	Common roadside weed in
			towns

Г

	SCIENTIFIC NAME	ENGLISH NAME	Notes
	Urticaceae (nettle family)		
Ε	Forsskaolea angustifolia		nr Masca
Ε	Gesnouinia arborea	Shrubby Pelitory	Anaga
е	Urtica morifolia		nettle in Erjos village
Ε	Parietaria filamentosa		Anaga
	Viburnaceae (viburnum fami	y)	
E	Viburnum rugosum		Anaga
	Viburnum tinus		Erjos
	Violaceae (violet family)		
E	Viola cheiranthifolia	Teide Violet	Teide (not yet in flower)
Ε	Viola anagae	Anaga Violet	Anaga (not yet in flower)
	MONOCOTYLEDONS Amaryllidaceae (daffodil fam	ily)	
Ε	Allium canariense		small white onion, Erjos
	Agapanthus praecox	Agapanthus	Common roadside weed
	Aracaceae (palm family)		
Ε	Phoenix canariensis	Canary Islands Palm	Eg around Masca
	Phoenix dactylifera	Date Palm	Commonly planted in towns
	Washingtonia robusta	Washingtonia	Commonly planted in towns
	Araceae (arum family)

#### BIRDS

This checklist follows the taxonomy published in the HBW and BirdLife International Illustrated Checklist of the Birds of the World, as updated by *www.birdsoftheworld.org* 

English names follow those used in the **Collins Bird Guide** (3<sup>rd</sup> edition).

E = species endemic to Canary Islands. e = species endemic to Atlantic Islands (Canary Islands, Madeira, Azores). *E* = subspecies endemic to Canary Islands. *e* = subspecies endemic to Atlantic Islands.

Tenerife 2024:	trip	report and	species	lists
	~ · · P	1 op or c arro	0000100	

	MOTHS		
e	Macaronesian Mocha	Cyclophora maderensis	Endemic to the Canary Islands and Madeira, where it lives in the Laurel forests. Larvae feed on <i>Erica arborea</i> . Cuevas Negras
	Yellow-underwing Pearl	Uresiphita gilvata	A rare migrant to the UK. On roadside, north of San Andres
E	Canary Islands Footman	Eilema albicosta	Endemic to the Canary Islands: commonly seen at the street lamps in La Orotava.
	Bordered Ermel	Ethmia bipunctella	Beautiful black and white moth, feeds on Echium species. A rare species in the UK associated with Viper's Bugloss. La Caldera.
	The Traveller	Costaconvexa centrostrigaria	North American species that, like the Monarch, has established itself in the Canary Islands. One or two at street lamps, La Orotava
E	Canary Islands Pug	Eupithecia tenerifensis	Endemic to the Canary Islands: at street lights, La Orotava
	Hummingbird Hawk Moth	Macroglossum stellatum	In the gardens, La Orotava

MISCELLANY			
Mountain Semi-Slug	Insulivitrina lamarckii	Anaga and Erjos	
Tropical Tent-web	Cyrtophora citricola	Pan-tropical, semi-colonial spider, forming	
Spider		big 'tent' webs: eg the gardens in La	
		Orotava	
Portuguese Man O' War Physalia physalis		One small blue 'balloon' floated past during	
		the boat trip.	

(clockwise, from top left): Canary Islands Red Admiral, Tenerife Blue Chaffinch, Monarch, Atlantic Canary
