### 18<sup>th</sup> November 2025. Bogotá

After battling through the snarled-up morning traffic of Bogotá, we took the funicular up Cerro de Monserrate, a forest-clad mountain rising to 3,152 metres above sea level, for our first taste of Colombian birding.

We started off our hummingbird list with Glowing Puffleg, Lesser Violetear and a fly-by Black-tailed Trainbearer around the gardens, before we headed to the other side where we enjoyed the tiny White-bellied Woodstar and big flappy Great Sapphirewing, a couple of Tyrian Metaltails clambered amongst the Abutilon flowers, and a Sparkling Violetear and Blue-throated Starfrontlet both held territories around the sugarwater feeders. The highlight came after lunch, when a Sword-billed Hummingbird was watched feeding on the trumpet Brugmansia flowers.

A constant stream of Black Vultures were soaring overhead, with a single Swainson's Hawk briefly joining them, halfway along his journey from the prairies of North America down to winter on the pampas of Argentina. More raptor excitement came at lunchtime, when an adult Black-chested Buzzard-Eagle circled low overhead for a while, attracting the angry attention of a Bat Falcon which put on a dramatic show as it harried the much larger eagle.

Back down amongst the flowering trees, several Black Flowerpiercers were also feeding on the various nectaring plants, 'stealing' the nectar by making a small hole in the base of the flowers using their odd little hooked beaks, while a party of Scarlet-bellied Mountain Tanagers came through the trees, adding a flash of bright colours. A handful of Blackburnian Warblers, a brief Cinnamon Flycatcher, Southern House Wren and a single Golden-fronted Redstart completed the bird list, before we made our way back down the mountain and our Uber rides back to the hotel.

We finished the day with a late afternoon wander to the nearby Parque El Virrey, a well-used urban greenspace, filled with joggers, dog walkers and playing kids.

Here we found several North American migrants, taking a break from the Canadian forests to spend their winters in warmer climes. A Broad-winged Hawk posed in a roadside tree, several Eastern Wood-Pewees made flycatching sallies from high up perches, a young Yellow-billed Cuckoo was gorging on a bug infestation, a lovely male Merlin perched up in a tree top, and a Northern Waterthrush was strutting along the margins of the drain running through the centre of the park.

### 19<sup>th</sup> November: west of Bogotá

An early start had us heading out of Bogotá in the dark, attempting (mostly successfully) to avoid the city's congested traffic.

At about 06.30, we came to the end of the paved road, where a short bathroom stop at a service station revealed some impressive moths attracted to the lights overnight, including the beautiful *Bathyrha sagata*, a large grey and white Noctuid moth that put on quite a display when disturbed, spreading its wings and flashing its furry yellow and black striped abdomen.

Suitably refreshed, we headed up hill towards the Laguna de Pedro Palo, gradually winding our way higher up into more forested slopes before a rather rickety wooden bridge inspired us to stop the bus and get out and walk...

Over the next four and a half hours, we walked no more than 3km: new birds were coming at us thick and fast, with something new to stop for around every corner, and we'd found 64 species by the time we rejoined the bus for our late morning snack.

Tanagers were a particular feature of the morning, with Golden, Bay-headed, Metallic-green, Scrub, Black-capped, Palm, Blue-grey and the bright red Summer Tanagers all adding some impressive splashes of colour to our birding.

Less colourful, but similarly diverse, were the various tyrant flycatchers, from the tiny Southern Beardless Tyrannulet and Variegated Bristle-Tyrant to the chunky Tropical Kingbird and Rusty-margined Flycatcher.

A high pitched whistle revealed the presence of a Moustached Puffbird, which eventually put on a great show as it sat patiently in the undergrowth, while nearby a group of four Moustached Brush-finches were equally showy.

Southern Emerald Toucanet, Red-headed Barbet, Smoky-brown Woodpecker, Olivaceous Piculet, Slate-throated Redstart and White-booted Racket-tail were amongst the other bird highlights of the morning.

Brightly metallic blue and red grasshopper nymphs were *Opaonella tenuis*, a species entirely restricted to the valley between the eastern and western Andes in central Colombia. The brown butterfly basking at the trackside was *Graphita griphe*, found throughout the northern Andes from Venezuela down to Peru. And an impressively large and bright red millipede entertained us as it attempted (not so successfully) to cross the track, eventually being helped on its way by Nigel.

After lunch in a roadside restaurant, we headed back towards Bogotá and a wetland close to the airport, at La Florida. The lake was busy with Andean Ducks, American Coot and Pied-billed Grebes, Bare-faced Ibis fed around the marshy margins where a handful of American Moorhen were also feeding, and a small group of Black-bellied Whistling Ducks were loafing on one of the nearby islands. A White-tailed Kite hovered over the far side, while above it a Short-tailed Hawk circled. The endemic Rail called a couple of times from the dense reeds, but refused to show itself, so we made do with a handsome Spot-flanked Gallinule at its northern-most site.

Eventually we dragged ourselves away from the water's edge, and headed back into the sprawling city, returning to the hotel at the end of an impressively bird-filled day.

## 20<sup>th</sup> November: the Páramo of Sumapaz

With 'local issues' putting our original páramo plans on hold, we headed instead to the Parque Nacional Natural de Sumapaz, the largest area of páramo (the northern Andean equivalent of moorland) in the world. An early start had us headed out of Bogotá, through some of the less salubrious suburbs of the city, before the traffic had really got going.

Our first roadside stop had us becoming acquainted with a suite of high altitude birds, all with multi-part names: a Bronze-tailed Thornbill flitted about the flowers, a Buff-banded Mountain Tanager put in a brief appearance, an Andean Tit-Spinetail appeared in the bushes alongside a Rufous-browed Conebill and a Plumbeous Sierra Finch.

Around the corner, we met up with Daniel, who brought us our breakfast as well as showing us a family of the endemic Apolinar's Wren.

On the nearby lagoon, a trio of Greater Yellowlegs were feeding on the margins, with American Coot and both Andean Teal and Andean Duck out on the water, where a larger duck turned out to be a young (and rather lost) White-cheeked Pintail.

Walking the roadsides, surrounded by the impressive 'frailejones' *Espeletia grandiflora* that make the páramo such an atmospheric place, we soon tracked down a male Green-bearded Helmetcrest, which kept returning to the yellow flowers of a roadside *Gynoxys* bush. Eventually, with some patience, we all got great views of this endemic hummingbird, one of the iconic stars of the reserve.

Lunch was at Daniel's house, after which we gritted our teeth and set off back into Bogotá...

## 21<sup>st</sup> November. Los Nevados

We started the day almost before the previous one had ended, heading to the airport to escape the traffic chaos that is Bogotá, and a short flight west, to Pereira and, from there, to Manizales.

After breakfast, at our new hotel on the outskirts of town, we set off up, up, up into the mountains, along the switchback roads through the subtropical forest and then out into the páramo beyond, and the Parque Nacional Natural Los Nevados, at a dizzying 4,200m asl. The second most obvious feature of the habitat up here were the tall 'frailejones' *Espeletia hartwegiana*, looking even more bizarre than those of the eastern Andes. The most obvious feature, today at least, was of course the cloud, which we were stuck in the middle of.

Alas, the dismal conditions weren't conducive to hummingbird-spotting, and we had to admit defeat in our hunt for helmetcrest number two, after quite a wait, making do with a White-chinned Thistletail, a showy Plumbeous Sierra Finch, and a brief Andean Tapeti, the native rabbit of the páramo from Venezuela to Peru.

**Photos** (clockwise, from top left): Green-bearded Helmetcrest, *Espeletia grandiflora*, Apolinar's Wren, *Linochilus alveolatus* (all Sumapaz National Park).

## Colombia 2025: trip report and species lists

Heading down from the clouds, we came to the thermal springs resort at Termales de Ruiz. Here, even before getting out of the bus, the birding had started, with a pair of stunning Golden-crowned Tanagers along with a Lacrimose Mountain Tanager in the car park, and an equally stunning, and much more bold Golden-breasted Puffleg venturing inside the minibus! This obviously wasn't going to be 'just' a lunch stop...

And so it turned out. We were led through the restaurant and up the hill behind, where a series of sugar-water and fruit feeders provided us with a constant stream of 'stunning'.

Shining Sunbeams were the new normal for the afternoon, with some amongst the crowds showing off their iridescent rainbow rumps. Amongst them, a handful of Great Sapphirewings were chasing back and forth, like great metallic blue bats, while Golden-breasted Pufflegs and both Tyrian and Viridian Metaltails visited the feeders more quietly. A beautiful male Tourmaline Sunangel put in a brief appearance, followed by a Buff-winged Starfrontlet towards the end of our visit. But perhaps the star of the hummingbird show was the male Rainbow-bearded Thornbill, who not only posed to show off his amazing rainbow beard and crest, but did so whilst perched on several members of the group.

But the 'battle of the birds' wasn't a one sided one: 'Team Hummingbird' didn't have it all their own way, when the mountain tanagers arrived... Scarlet-bellied, Lacrimose and the bulky boss of the mountains, Hooded Mountain Tanager all did their bit to (very successfully) distract us from the buzzing hummers.

Masked and Glossy Flowerpiercers, Pale-naped Brushfinch, a reticent Andean Guan, a handful of glowing Golden-fronted Redstarts and a brief Pearled Treerunner all made for a great support act, but the afternoon really belonged to the hummingbirds and mountain tanagers...

### **22<sup>nd</sup> November. Rio Blanco**

If yesterday was a day of tanagers and hummingbirds, today was a day of antpittas and lepidoptera... and more hummingbirds.

After coffee and an American Redstart in the garden, we headed down into Manizales, and then out again to the Rio Blanco Ecological Reserve, an area that protects almost 5,000 hectares of the Rio Blanco catchment, and the forests that provide drinking water to the city below.

Driving the track up to the lodge, we stopped twice for roadside Andean Motmot and Golden-headed Quetzal, an impressive introduction to the reserve.

Once at the lodge, we were introduced to Mateo, our guide for the day, and made our way up to the verandah, looking out over the hummingbird feeders, which were alive with birds: Buff-tailed Coronet was the most numerous, with ten or more hanging around the feeders and chasing up into the surrounding trees, along with one or two each of nine other species. New for us were the amazing Long-tailed Sylph, both Collared and Bronzy Inca, the demure Speckled Hummingbird, Fawn-breasted

**Photos** (clockwise, from top left) Rainbow-bearded Thornbill, Hooded Mountain-Tanager, Shining Sunbeam, Scarlet-bellied Mountain-Tanager (all Termales Del Ruiz).

Brilliant, and a single female Mountain Velvetbreast, who was staying well clear of the sugar-fuelled mayhem. Joining in the gorging were White-sided and Masked Flowerpiercers, while shyer visitors to the fruit feeders were Blue-winged Mountain Tanager, Northern Slaty Brushfinch and Grey-browed Brushfinch.

Up on the verandah itself, the lights had obviously been on over night, as the walls and ceiling were covered with moths, with more than forty species: notable 'stand outs' were two large emperor moths, *Automeris banus* and *Leucanella memusae*, both with dazzling eyespots revealed when they were disturbed, and some impressive tiger moths and emerald moths, amongst many many others.

Our antpitta entertainment started at 08.30 on the dot, with Pancho and Pancha, a pair of Chestnut-crowned Antpittas, turning up exactly on schedule. Then it was up the hill, for an appointment with the diminutive Nana, a Slate-crowned Antpitta, who was less keen on mealworms and quickly disappeared back into the tangled undergrowth. And our third scheduled feeding time was back down at the lodge, where Pollo, a ridiculously bold Brown-banded Antpitta came in for his worms, along with a shyer Slaty-backed Nightingale-Thrush.

In between the hand-tamed antpitta appointments, we enjoyed a couple of mixed species flocks coming through the forest, containing Crimson-mantled Woodpecker, Pearled Treerunner, Black-billed Peppershrike and the lovely little Rufous-crowned Tody-Flycatcher, alongside various tanagers named for the many bright colours to be found splashed amongst them.

As the sun warmed the forest up, butterflies became more evident, with at least ten species photographed and no doubt more flitting by un-noticed.

After lunch, we headed back down to the river, where we found White-capped Dipper and Torrent Tyrannulet around the water treatment works, and even more colourful butterflies, with every combination of black, red and blue, culminating in the beautiful *Siostra bifasciata* alongside six other species, 'puddling' in the car park.

An early return to the hotel, for once, gave some of us time to explore the grounds a bit more, where the last bit of excitement of the day came in the form of a Nine-banded Armadillo trotting across the lawns after dinner!

### **23<sup>rd</sup> November. Hacienda El Bosque, and then back up the mountain**

Another day, another early start and another breakfast out 'in the field', this time in the rather swanky restaurant-with-a-view at Hacienda El Bosque, just half an hour down the road and a thousand meters higher.

The forested watercourses of this working dairy farm provide a home to some of the special birds of the central Andes, and the owners have made a recent pivot to ecotourism, to show off their local residents at a series of feeding stations, which kept us more than entertained through the morning.

**Photos** (clockwise, from top left) Chestnut-crowned Antpitta, White-sided Flowerpiercer, *Dysschema arema*, *Leucanella memusae* (top) and *Automeris banus* (bottom) (all Rio Blanco).

We started with an Equatorial Antpitta being summonsed from the undergrowth, along with the bizarre sight of a White-browed Spinetail taking mealworms from our host's fingers, while the same patch of trees was home to a passing flock with Pearled Treerunner, both White-throated and White-banded Tyrannulets and a couple of lovely Blue-backed Conebills, as well as a brief Tyrannine Woodcreeper.

Back up onto the ridge, and the hummingbird feeders were alive with Shining Sunbeam, Buff-winged Starfrontlets and Tourmaline Sunangels, plus the occasional White-bellied Woodstar, Mountain Velvetbreast and the amazing Sword-billed Hummingbird, while in the background a glowing Purple-backed Thornbill was picking through the yellow blooms of a flowering tree: the hummingbird with the shortest bill and that with the longest bill in view at the same time.

The next antpitta on our itinerary failed to show, but we were more than happy with the views of Yellow-bellied Chat-Tyrant, Northern Slaty Brushfinch and especially cute Mountain Wrens that were taking advantage of the food in the antpitta's place.

Less frenetic, but no less thrilling, the fruit feeders nearby attracted both Andean and Sickle-winged Guan, while a dumpy White-throated Quail-Dove waddled through, picking at the corn as it went. But here, the stars of the show were a pair of bold Grey-breasted Mountain-Toucans, with a taste for grapes... More toucan-excitement came when a single Black-billed Mountain-Toucan appeared in the nearby trees, a much rarer visitor to the reserve, and not one who was tempted by the fruit this time.

Back to the Hacienda for lunch, after which we decided to give the lofty heights of Los Nevados another try... Roger took us to a hillside where, from amongst the dense cloud, a flock of the endemic Rufous-fronted Parakeet put in a brief appearance, before we tried our luck back up the top, in the hope that the clouds might break for us...

30 minutes later, back up at the Brisas visitor centre, and a call over the radio from Roger had us hurrying just around the corner, to a narrow path through the bushes, where a male Buffy Helmetcrest was sitting just an arm's length away from us! A stunning hummingbird, all the more thrilling for the effort we'd put in, and a superb end to our day in the mountains.

### **24<sup>th</sup> November. To the Caribbean coast**

A travel day took us from Manizales back to Pereira, a short flight back to Bogotá and then a hop north to Riohacha on the Caribbean coast, where we arrived at our hotel in time for a late lunch, with Grey-breasted Martins and a very tame Cattle Tyrant flitting about the rooftops and Magnificent Frigatebird, Brown Pelican, Royal Tern, Laughing Gull and a fishing Osprey visible out on the beach.

In the afternoon, we headed out to the shrimp-fishing community of Camarones, aptly named, where we met up with local guide Alvaro. He led us out onto the shores of the lagoon where a pair of Double-striped Thick-knees emerged from the rough vegetation, Grey Kingbird and Bare-eyed Pigeon flew about the scrub, and a luminous Scarlet Ibis was the pick of the waterbirds, along with Large-billed and Gull-billed Terns.

**Photos** (clockwise, from top left): Sparkling Violetear, Sword-billed Hummingbird (Hacienda El Bosque), Buffy Helmetcrest (Los Nevados NP), Buff-winged Starfrontlet (Hacienda El Bosque)

Heading further round towards the mouth of the river, we found more waders, with a Lesser Yellowlegs, Pectoral Sandpiper and Solitary Sandpiper sharing a small roadside pool, Greater Yellowlegs, Willet and Reddish Egrets out in the saline shallows, and a pack of roosting Black Skimmers out near the fishing village, together with which we found a single Short-billed Dowitcher, American Oystercatcher and a handful of both Royal and Sandwich Terns.

In the trees in the village, a group of Green-rumped Parrotlets were hiding amongst the foliage, with a massive roost of Magnificent Frigatebirds visible in the mangroves at the far side of the water, near to which a distant group of bright American Flamingos were feeding, as the sun set over the Caribbean...

### **25<sup>th</sup> November. Los Flamencos**

This morning we headed back towards Camarones, but turned our back to the wetlands and headed inland, focussing on the dry forest of Los Flamencos.

Meeting up with local guide 'Tigre', we walked along a seemingly unremarkable track through the low scrubby forest, enjoying the dawn chorus, amongst which were an exciting suite of birds restricted to this arid habitat, shared between northern Colombia and Venezuela: Chestnut Piculet, White-whiskered Spinetail, Slender-billed Tyrannulet and Orinocan Saltator, along with the stunning Vermillion Cardinal, surely the reddest of red birds.

Flocks of noisy Brown-throated Parakeets flew back and forth, before one group paused in the tree tops, allowing some close views. A single Buff-necked Ibis flew past, and a party of four Crane Hawks came playing overhead.

Headed deeper into the undergrowth, we found Buffy Hummingbird, and some 'subtle' tyrant flycatchers... Fulvous-crowned Scrub-Tyrant, Northern Scrub-Flycatcher, Pale-tipped Tyrannulet and Alder Flycatcher all did their best to imprint themselves on our memories.

After another tasty breakfast back at Tigre's family home, we headed to his feeding station, where Vermillion Cardinal, Pileated Finch, Red-crowned Woodpecker and Scaled Dove posed at point blank range, a male Ruby-topaz Hummingbird zipped about the black-flowered porterweed *Stachytarpheta orubica*, and a pair of Chestnut Piculets were visiting a nest site in a hollow tree, as the day's temperatures steadily rose...

Lunch was back at the hotel, where we had a couple of hours rest before heading out once again, back to Camarones, but this time for a boat trip out around the edge of the mangroves fringing the shallow lagoon.

**Photos** (clockwise, from top left): Vermillion Cardinal, Scaled Dove, American Flamingo, Black Skimmer (all Los Flamencos)

The flocks of American Flamingo that give the reserve its name were wonderful to see, with around 140 of the estimated 10,000 birds that make these lagoons their home seen, alongside good numbers of various herons and egrets, Wood Stork, Roseate Spoonbill and at least two Scarlet Ibises amongst larger numbers of White Ibis and the pink-hued hybrid between the two.

A pair of Aplomado Falcon took exception to a passing Peregrine Falcon, soon chasing it out of their territory, before turning their attention back to the various waders enjoying the muddy margins.

With so much to see, it was hard to pull ourselves away, and we ended up making the most of the daylight, returning back to dry land after dusk had fallen.

### **26<sup>th</sup> November. Headed west.**

A travel day, we bid farewell to Riohacha and headed west along the Caribbean coast, watching as the landscape became less arid, with the trees becoming noticeably taller, the forests lush as we left Guajira province and moved to Magdalena province.

In the city of Santa Marta, we changed vehicles, and moved into four four-wheel drives to head up into the mountains of the Sierra Nevada de Santa Marta, Colombia's highest mountain range, and one of the highest coastal mountain ranges in the world.

We arrived at Mountain Lodge, our home for the next few nights, just as the heavens opened and the rain set in for the afternoon. The rest of the day was spent enjoying the bird-filled vistas from the lodge's balconies. Nine species of hummingbird buzzed around the sugar feeders, including our first White-necked Jacobin, Lazuline Sabrewing and abundant Crowned Woodnymphs, while the banana feeders attracted a constant stream of Blue-naped Chlorophonia, Black-headed, Black-capped and Bay-headed Tanagers, Tennessee Warblers, Black-chested Jay and Crested Oropendola.

Our first Santa Marta endemic came in the form of Santa Marta Brushfinch, shuffling about on the floor beneath the shrubs.

### **27<sup>th</sup> November. Santa Marta: downhill**

A positively leisurely start to the day, with breakfast in the lodge as the birds came and went from the feeders, including a handful of 'newbies': a velvety bright Crimson-mantled Tanager at the bananas, a dumpy Lined Quail-Dove in for the corn, and a tiny buzzing Santa Marta Woodstar enjoying the orange flowers of the Marmalade Bush *Streptosolen jamesonii*.

The plan for the morning was to take the cars downhill, exploring along the way.

Stop number one was at the informal 'entry check point', where more Santa Marta Woodstars were buzzing about, a pair of Sierra Nevada Brushfinches brought their fledged youngster to the cooked rice put out by the lady of the house, followed not long after by a Central American Agouti, emerging from the forest for his free breakfast.

Our next roadside amble coincided with the passage of about 30 White-collared Swifts high overhead, a singing Orange-billed Nightingale-Thrush, and a very smart Santa Marta Antbird climbing around in the tangles of vines, while the trill of a Santa Marta Tapaculo came from the hill behind.

Our eventual destination this morning was to be the La Victoria coffee farm, but first we had to make our way slowly along the entry road, enjoying Chestnut-capped Warbler, a pair of Golden-winged Sparrows, a showy Scaled Piculet and a rather shy Gartered Violaceous Trogon along the way, along with some rather nice butterflies.

We ended the morning by learning all there is to know about coffee production, and sampling some of La Victoria's product, before heading back homewards, stopping along the way for one more try at the check point gardens... where, this time, the Marmalade Bush and purple Porterweed flowers were visited by a Santa Marta Blossomcrown, a small brownish hummingbird with a pinky cap.

Our afternoon wander took some of us back down the same road by foot. The birdlife is always pretty quiet during the second half of the day, but this afternoon was definitely one of quality over quantity. Coming round a corner, we found a Military Macaw silhouetted against the misty skies, sat at the top of a tree. The cloud descended, washing out much of the colour of this handsome, green and red beast of a parrot... but from the mists came the calls of a second bird, perched just out of sight, with the two of them taking off and flying around, before landing back where they'd started.

Moving on, the horse-like whinnying of a Rusty-breasted Antpitta came from the hillside, a tiny skulker of a bird which was eventually persuaded to reveal itself in all its minute, russet glory as it hopped up briefly into another tangle of vines... the same habitat that was favoured by a pair of White-lored Warblers, one of three warblers endemic to the Santa Marta mountains, and luckily a little bit showier than the tiny antpitta!

We eventually made it back down to the 'entry point' gardens, for our third visit of the day: this time the Santa Marta Blossomcrown was a bit more forthcoming, eventually posing for binocular views as it zipped round and round its favoured circuit of Porterweed flowers. A long-tailed Pale-bellied Hermit put in a brief appearance, and the agouti had been replaced by a Band-tailed Guan, similarly gorging on the food put out by the residents.

### **28<sup>th</sup> November. Santa Marta: uphill to the San Lorenzo Ridge**

Our final pre-dawn start of the trip, we set off in the cars in the dark, bumping our way up the track to the higher elevations, up to the San Lorenzo Ridge.

The Sierra Nevada de Santa Marta mountains are home to a whole suite of endemic birds, of which the majority are at home up in the higher reaches of the hills: this morning was to be our chance to see as many of them as we could.

**Photos** (clockwise, from top left). Yellow-crowned Redstart, Carriker's Mountain Tanager, White-tailed Starfrontlet, Santa Marta Antpitta (all San Lorenzo Ridge, Sierra Nevada de Santa Marta)

We stepped out of the cars into the pre-dawn gloom of the ridge, with the sounds of Santa Marta Warbler, Streak-capped Spinetail, Rusty-headed Spinetail, Hermit Wood-Wren and Brown-rumped Tapaculo all around us, while a couple of Santa Marta Brushfinches bumbled through the thicket and a large Black-cheeked Mountain Tanager fed in the canopy above us, each of them found here and nowhere else on the planet.

While the Santa Marta Parakeets were a 'no show', a call over the radio had us walking at pace a little way up the road, to the ranger station, where a Santa Marta Antpitta was popping out of the bamboo undergrowth for his breakfast of chopped up worms.

Near the cars, a pair of Yellow-crowned Redstarts showed well, and a male Carricker's Mountain Tanager sang from the top of the bushes, this the most recent of the mountains' endemics, having only been officially 'split' from what used to be Buff-breasted Mountain Tanager in October this year!

After venturing further uphill, and hearing but (frustratingly) not seeing several Santa Marta Warblers, over breakfast a non-endemic stole the show, with a trio of White-tipped Quetzals calling and flying amongst the lichen-laden trees. Non-endemic for now, that is, as the Santa Marta population is well separated from the other parts of the species' range, in the coastal mountains of Venezuela.

Back at the hummingbird feeders by the ranger's hut, two female White-tailed Starfrontlets got us back on endemic-track, while a bit further downhill a pair of Hermit Wood-Wrens showed fantastically, followed not long after by a Sierra Nevada Antpitta, this one not having any association with chopped up worms, for a change!

One last endemic was on the cards for us: just as we were about to get back into the cars to head down hill, one of the drivers found a roosting pair of Santa Marta Screech-Owls, a species only described as recently as 2017, and our 19<sup>th</sup> species endemic to these mountains.

Heading down hill, the clouds moved in, followed by some heavy rain just as we found a pair of Golden-breasted Fruiteaters. The rain finally sent us packing, returning to Mountain House for lunch, where a Santa Marta Blossomcrown made an appearance in the gardens.

### **29<sup>th</sup> November. Back to the Caribbean**

One last morning on the balcony with the chlorophonias and Crowned Woodnymphs, and a Keel-billed Toucan put in an appearance over breakfast, before we were headed back down to the lowlands, bidding farewell to the drivers as we transferred back onto the bus.

Our journey took us across the narrow spit of land separating the Caribbean from the main lagoon of the Ciénaga Grande, the largest coastal wetland in Colombia, home to vast numbers of waterbirds, which were much in evidence at the roadside.

A break in our journey saw us investigating a strip of roadside marshland along the banks of the Magdalena River as it passed through the port city of Baranquilla. Here we had fantastic views of a pair

## Colombia 2025: trip report and species lists

of Northern Screamer, giving us a fly past and doing what screamers do, with Limpkin, Snail Kite, Yellow-hooded Blackbird and Pied Water-Tyrant all adding to our ever-growing bird list.

Further along our journey, we took another brief detour to check out another roadside wetland, this one a lake surrounded by woodland and cattle pasture. Purple Gallinules, Limpkin and two lovely Least Bitterns put on a show in the reedy margins, both Pied-billed and Least Grebes were found amongst the large numbers of American Moorhen, the latter acting more like Coot out in the open water, and a variety of ducks included a pair of American Wigeon and a surprise in the form of a female Ring-necked Duck, a North American vagrant to Colombia, and a new bird for Roger!

A Chestnut-winged Chachalaca flying across the road inspired our next roadside stop, where the bushes at the roadside proved to be filled with birds: Hooded and Glaucous Tanagers, Northern Yellow and Prothonotary Warblers, Trinidad and Thick-billed Euphonias, Scrub Greelet, Black-crested Antshrike and a posing Rufous-tailed Jacamar all did their best to distract us from the ongoing journey...

We ended the day in our beach-front hotel on the outskirts of Cartagena, where we all took full advantage of the hot water and air conditioning.

### **30<sup>th</sup> November. Agricola Camelia**

We had all had our fill of early morning starts, so we enjoyed breakfast in the hotel before heading out to the fruit farm and dry woodland of Agricola Camelias, where Rafael introduced us to his farm and it's wildlife.

A Black-throated Mango was our final new hummingbird of the trip, feeding on the same patch of porterweed as a female Ruby-topaz Hummingbird, Red-billed Emerald and Rufous-tailed Hummingbird.

A Brown-throated Three-toed Sloth in a treetop was a wonderful spot, and our mammal highlight of the trip, a handsome Rufescent Tiger-Heron posed on the little tree-lined lagoon, and the warm weather brought out the butterflies, with 25 species photographed before lunch.

The rising temperatures eventually defeated us, and we headed back to Cartagena and our air-conditioned rooms...

### **1<sup>st</sup> December. Cartagena and home**

Our Colombian holiday ended with a cultural tour of Cartagena, taking us from the Convento de la Popa on a hilltop overlooking the city to the Castillo de San Felipe de Barajas, and finishing up in the warren of streets in the old town.

And with that, our time in Colombia came to an end.

Philip Precey, Wildlife Travel, December 2025.

**Photos** (clockwise, from top left): Black-headed Tanager and Blue-naped Chlorophonia (Mountain House), Northern Screamer (Baranquilla), Rufescent Tiger Heron (Agricola Camelia)

## BIRDS

This checklist follows the eBird taxonomy, as published by Cornell Lab at [www.birdsoftheworld.org](http://www.birdsoftheworld.org)

Shaded rows highlight Colombian endemics.

<b>Family Notodontidae (prominent moths)</b>		
<i>Didugua argentilinea</i>		22 <sup>nd</sup> : Rio Blanco
<i>Hemiceras sp.</i>		29 <sup>th</sup> : Mountain House
<i>Hemiceras oleaginea</i>		29 <sup>th</sup> : Mountain House
<b>Family Pterophoridae (plume moths)</b>		
<i>Lantanophaga pusillidactylus</i>	<b>Lantana Plume Moth</b>	22 <sup>nd</sup> : Rio Blanco
<b>Family Sphingidae (hawkmoths)</b>		
<i>Enyo lugubris</i>	<b>Mournful Sphinx</b>	1 <sup>st</sup> : Cartagena monastery: brown wing
<i>Eumorpha labruscae</i>	<b>Gaudy Sphinx</b>	1 <sup>st</sup> : Cartagena monastery: green wing
<i>Adhemarius gannascus</i>	<b>Pink Sphinx</b>	26 <sup>th</sup> : Mountain House

## Colombia 2025: trip report and species lists

Family Saturniidae (emperor & giant silk moths)		
<i>Automeris banus</i>		22 <sup>nd</sup> : Rio Claro
<i>Copaxa decrescens</i>		29 <sup>th</sup> : Mountain House
<i>Hylesia sp.</i>		22 <sup>nd</sup> : Rio Claro
<i>Leucanella memusae</i>		22 <sup>nd</sup> : Rio Claro
<i>Molippa sabina</i>		26 <sup>th</sup> : Mountain House
<i>Oxytenis sp</i>		27 <sup>th</sup> : Mountain House
<i>Rothschildia sp.</i>	an atlas moth	27 <sup>th</sup> : Mountain House
Family Thyrididae (window-winged moths)		
<i>Dysodia sp</i>		29 <sup>th</sup> : Mountain House
Family Uraniidae (scoop-winged moths)		
<i>Erosia cf incendiata</i>		22 <sup>nd</sup> : Rio Blanco

## MISCELLANEOUS

<i>Micrathyria aequalis</i>	Spot-tailed Dasher	30 <sup>th</sup> : Agricola Camelia
<i>Veturius sp.</i>	a bess beetle	19 <sup>th</sup> : Pedro Palo
<i>Pseucosycheila sp</i>	a tiger beetle	19 <sup>th</sup> : Pedro Palo
<i>Semiotus imperialis</i>	a click beetle	28 <sup>th</sup> : Mountain House
<i>Heterogomphus dilaticollis</i>	a rhinoceros beetle	27 <sup>th</sup> : Mountain House
<i>Playtcoelias p</i>	a scarab beetle	27 <sup>th</sup> : Mountain House
<i>Cyclocephala amazona</i>	a masked chafer	27 <sup>th</sup> : Mountain House
<i>Viadana sp</i>	a leaf katydid	26 <sup>th</sup> : Mountain House
<i>Opaonella tenuis</i>	a grasshopper	19 <sup>th</sup> : Pedro Palo. The colourful little grasshopper, endemic to the inter-Andean valley of central Colombia
<i>Bombus funebris</i>	Grey-backed Bumblebee	23 <sup>rd</sup> : Los Nevados

**Butterflies of Colombia:**

Row 1: *Janatella fellula*, *Hypanartia kefersteini*, *Actinote ozomene*

Row 2: *Adelpha olynthia*, *Perisama oppelii*, *Arawacus lincoides*

Row 3: *Burnsius oileus*, *Dynamine postverta*, *Euptychia westwoodi*

Row 4: *Diaethria gabaza*, *Anartia amatheia*, *Dismorphia theucharila*

## Colombia 2025: trip report and species lists

### Moths of Colombia:

Row 1: *Bathyra sagata*, *Herbita* sp, *Mesothera nomia*

Row 2: *Siostra bifasciata* (yes, that's a moth!), *Quentalia intranea*, *Bassania foingi*

Row 3: *Neonerita bernardoenspinozai*, *Praeamastus albipuncta*, *Pantherodes* sp.

Row 4: *Symphlebia palmeri*, *Cosmosoma achemon*, *Molippa sabina*

## PLANTS

SCIENTIFIC NAME	ENGLISH NAME	NOTES
<b>Acanthaceae (Acanthus family)</b>		
<i>Ruellia macrophylla</i>		27 <sup>th</sup> : Santa Marta roadsides
<i>Thunbergia alata</i>	Black-eyed Susan	19 <sup>th</sup> : Laguna Pedro Palo
<b>Alstoemeriaceae (Peruvian lily family)</b>		
<i>Bomarea patinii</i>		19 <sup>th</sup> : Laguna Pedro Palo
<b>Apocynaceae (milkweed family)</b>		
<i>Calotropis procera</i>	Giant Milkweed	25 <sup>th</sup> : Los Flamencos dry forests
<b>Arecaceae (palm family)</b>		
<i>Ceroxylon ceriferum</i>	Sacred Wax Palm	28 <sup>th</sup> : San Lorenzo Ridge
<b>Aristolochiaceae (birthwort family)</b>		
<i>Aristolochia maxima</i>		30 <sup>th</sup> : Agricola Camelia
<b>Asteraceae (daisy family)</b>		
<i>Espeletia grandiflora</i>		20 <sup>th</sup> : Sumapaz Endemic to Eastern Colombian Andes
<i>Espeletia hartwegiana</i>		21 <sup>st</sup> : Los Nevados Endemic to Central Colombian Andes
<i>Gynoxys hirsuta</i>		20 <sup>th</sup> : Sumapaz
<i>Linochilus alveolatus</i>		20 <sup>th</sup> : Sumapaz Endemic to Eastern Colombian Andes
<i>Linochilus schultzei</i>		21 <sup>st</sup> : Los Nevados Endemic to Central Colombian Andes
<i>Monticalia vaccinioides</i>		20 <sup>th</sup> : Sumapaz.
<i>Munnozia senecionidis</i>		22 <sup>nd</sup> : Rio Blanco
<i>Senecio formosus</i>		20 <sup>th</sup> : Sumapaz. 21 <sup>st</sup> : Los Nevados
<i>Senecio niveoaureus</i>		21 <sup>st</sup> : Los Nevados
<b>Begoniaceae (begonia family)</b>		
<i>Begonia chlorolepis</i>		28 <sup>th</sup> : San Lorenzo Ridge Endemic to Santa Marta mountains
<i>Begonia guaduensis</i>		27 <sup>th</sup> : Santa Marta roadsides
<i>Begonia urticae</i>	Nettle-leaved Begonia	22 <sup>nd</sup> : Rio Blanco
<b>Bromeliaceae (bromeliad family)</b>		
<i>Cipuropsis hospitalis</i>		28 <sup>th</sup> : San Lorenzo Ridge Endemic to Santa Marta mountains
<i>Cipuropsis elata</i>		28 <sup>th</sup> : Santa Marta roadsides
<i>Guzmania multiflora</i>		22 <sup>nd</sup> : Rio Blanco
<i>Tillandsia caloura</i>		28 <sup>th</sup> : San Lorenzo Ridge Endemic to Santa Marta mountains
<i>Tillandsia fendleri</i>		22 <sup>nd</sup> : Rio Blanco
<i>Tillandsia sigmoidea</i>		28 <sup>th</sup> : San Lorenzo Ridge Endemic to Santa Marta mountains
